JONGIN CHOI

Seoul, Korea | jic.jonginchoi@gmail.com | github.com/nopgae | nopgae.github.io

EDUCATION

Pennsylvania State University ***May 2025***

Bachelor of Science, Applied Data Sciences *University Park, PA*

- Relevant Coursework: Data Analysis, Software Engineering, Statistics, Algorithms, Artificial Intelligence, Machine Learning

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript
Data & ML: Pandas, NumPy, Scikit-learn, PyTorch, HuggingFace Transformers, Jupyter, Spark
Web & Scraping: Beautiful Soup, Selenium, HTML/CSS
Databases: MySQL, MongoDB
Tools: Git, Linux, Docker

EXPERIENCE

Research Assistant — Multimodal Emotion Dataset (FeelReel) ***Jun 2024 – Mar 2025***

Pennsylvania State University, Data Science Lab (Prof. Sharon Hwang) · IST 495 internship credit *University Park, PA*

- Supported the follow-up phase of FeelReel, a lab benchmark of 400K+ Reddit images and 5M+ comments for emotion understanding (earlier version submitted to CVPR 2024).
- Sourced and organized Reddit image posts and comments through the project's data collection pipeline, keeping datasets structured and reproducible.
- Built the MTurk survey (HIT) page and collected human evaluation responses on the dataset's emotion annotations through it.

PROJECTS

Medical Transcription Classifier — Penn State DS 310 ***Fall 2024***

- Classified medical transcriptions into 6 specialties using TF-IDF (1–3 grams) plus document-length features; final weighted F1 0.807.
- Tuned XGBoost over 54 configurations with 5-fold CV (270 fits), then showed untuned logistic regression still won (F1 0.763 vs 0.711) and traced it to sparse features.

Cobot Performance — Integration Lead, Penn State course ***Jan – May 2025***

- Learned a robot-specific language and tablet software to turn teammates' choreography into cobot motion; coordinated a multinational team in Korean and English and placed 2nd in the class.

Used Car Browser — Web Application ***Feb 2025 – Present***

- Developed a web application for searching, filtering, and comparing used car listings from multiple online marketplaces.
- Implemented web scraping with Python (Beautiful Soup) to collect and normalize vehicle data from various sources.
- Designed and optimized a MySQL database to store and retrieve thousands of vehicle listings efficiently.

StockPulse — Korean Stock Market Analysis Tool ***Mar 2025 – Present***

- Developing a stock analysis tool that aggregates KRX market data and Korean financial news for technical indicator monitoring.
- Implemented data pipelines using pykrx and FinanceDataReader libraries for automated stock data collection.

Crime & Weather Data Analysis — Chicago ***Sep 2024***

- Analyzed correlations between crime rates and weather conditions by integrating City of Chicago crime records with daily weather data.
- Used SQL to merge heterogeneous datasets and performed data cleaning to ensure analytical consistency.

ADDITIONAL INFORMATION

Languages: Fluent in English and Korean (bilingual); TOEIC Speaking 160 (AL)
Interests: Web security CTF (webhacking.kr), Boston Dynamics Spot robotics, Korean stock market analysis
